

Q1. What sizes are the largest and smallest Tree Grilles?

A. The smallest tree grille in our range is 800mm square (or round).
The largest tree grille in the Standard Broxap range is 2020mm (square or round options).
Our load bearing Buderus range offers a maximum size of 2800mm diameter.

Q2. Why do I need a Tree Frame?

A. It is essential that a Tree Frame is used in conjunction with a Tree Grille. The frame provides support to the grille. If not used, the tree grille will not be securely held in place and may sink or shift.

Q3. Can the Tree Grille be easily stolen when in situ?

A. Broxap recommend that security clamps are used when installing a tree grille and frame. Security clamps secure the tree grille to the frame to prevent theft. Security clamps are illustrated in the tree protection section of the Broxap Main Product Catalogue.

Q4. Can a Tree Guard be installed at a later date?

A. Yes, a tree guard may be supplied and installed at a later date. In this instance the tree guard is supplied with spiked legs which may be concreted into the ground allowing simple installation.

Q5. Can I install a Tree Grille and frame before the tree has been planted?

A. Yes, this may be achieved by using a tree frame with detachable central supports.

Q6. Can Tree Grilles be supplied with irrigation holes and uplighter holes?

A. Yes, any tree grill can be supplied with irrigation or uplighter holes. Current models are detailed in the Broxap Main Product Catalogue.

Q7. Do Tree Grilles corrode?

A. All mild steel components such as the Tree Frames & Tree Guards are galvanized and will not corrode. Broxap Tree Grilles are coated with a high quality acrylic paint. If the paint is chipped and not repainted the grille will show slight surface oxidation however this will not affect the integrity of the grille. System Buderus Tree Grilles are supplied uncoated as standard and are allowed to oxidise. After a short period of time this forms a self protecting layer.

Q8. When would a Buderus Tree Protection system be used?

A. A Buderus tree protection system should be used in areas where the possibility of vehicles passing near to or over the tree grille exists. Buderus grilles are specifically designed and tested to withstand pre-determined loads.
