

Cast Iron Bins: Fixings

Bolt Down Fixing:

Manufactured with four predrilled holes, Broxap's litter bins can be fixed in place using a "bolt down" method. These predrilled holes, which can be found in the base of the litter bin, allow the product to be securely fixed to a concrete base with four M10 x 120 raw bolts.

Baseplate & Ragbolt Fixing:

Broxap's cast iron litter bins can be permanently secured using a baseplate and ragbolt. The ragbolt is fitted directly into the concrete. Following this the bin can then be positioned over the ragbolt and the base plate can then be inserted. This is then secured down with a threaded nut.
