

Dog Waste Bins: Fixings

Bolt Down Fixing:

Manufactured with four predrilled holes, Broxap's litter bins can be fixed in place using a "bolt down" method. These predrilled holes, which can be found in the base of the litter bin, allow the product to be securely fixed to a concrete base with four M10 x 120 raw bolts.

Post Mounted:

Broxap's post mounted litter bins are root fixed into a concrete pocket. This gives a permanent, and secure ground fixing option for select litter bins. To ensure a safe and secure fixing option, Broxap recommend having 500 or 600mm root.
