Waste to Landfill

By becoming a H Brown & Son (Recycling) Ltd customer

Broxap Ltd

have now achieved the environmental pinnacle – Zero Waste to Landfill.

H Brown & Son (Recycling) Ltd have the extensive industry knowledge and latest technology to provide the full range of reuse, recycling, recovery and disposal options – the total waste management solution.

But this best practice isn't just an adage to Brown's – "Zero Waste to Landfill" is reality.

General waste

Processed to RDF (Refuse Derived Fuel) at Brown's RDF facility
RDF is used to fuel a UK based EfW (Energy from Waste) facility in the Northwest of England

Cardboard

Loose material is collected from site and baled at Brown's cardboard recycling facility
Material is supplied to paper mills throughout the UK or Asia

Brown's prepared a detailed analysis of both costs and environmental impact relating to the onsite waste management requirements, in order to present a commercial and environmental case for the implementation of the zero to landfill system.

Nothing had to be changed in terms of how the waste streams were being managed onsite, the main changes were to find long term sustainable outlets for all materials – which has been achieved.
